

# Can't Preview PDF Files in Outlook 2007

Outlook 2003 did not have the preview feature that Outlook 2007 does.

PDF file attachments in Outlook 2007 are not previewed when the user SINGLE clicks the attachment and the following message is displayed.

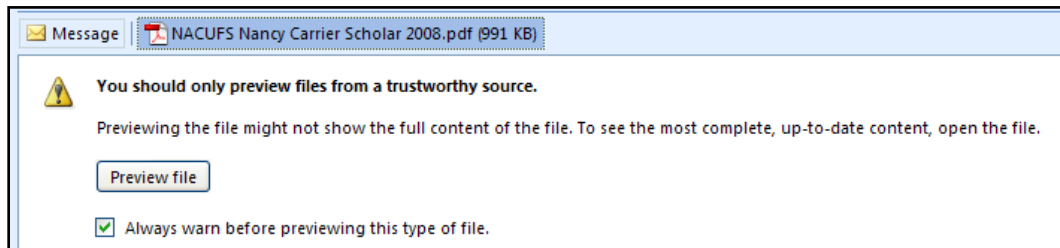

## Solutions

1. Install Adobe Reader 8.0, then update it  
Uninstall the older version of Adobe Reader first  
The install and update of Adobe Reader 8 is slow and it may stop half way through  
In that case a "Resume Installation" icon will appear on your desktop  
Double click the icon to resume installation
2. Don't preview, just open the file instead by double clicking the attachment

## Preview PDF File

Single click the attachment  
Click Preview file button

Preview appears
