

SCATTERPLOT

To generate a scatterplot, specify the variable that you would like on the y-axis (here, ach100) and the variable that you would like on the x-axis (here, consis) on the third line. The second line requests that a best-fit regression line be drawn on the scatterplot.

```
plot  
  /format regression  
  /plot ach100 with consis .
```

Plot
