

Mercury 3000Si Smart Encoder Systems

High Speed Serial Word Output with Resolution to 0.020µm*

Reflective Linear and Rotary Encoder Systems

Resolution

Linear: 5µm to 0.020µm*
Rotary: 6,600 to 16.8 M CPR

Accuracy

Linear: ± 1µm available
± 3µm to ± 5µm standard
Rotary: Up to ± 2.1 arc-sec

Output

High Speed Serial Word in
SPI Format

The New Mercury 3000Si encoder represents the next level of encoder performance. With high speed operation, smallest sensor size, easiest alignment, and superior noise immunity, the M3000Si delivers Best-in-Class performance.

Imagine what you can do with this!

The new Mercury 3000Si can reduce the cost and size of your system, and improve its performance all at once! MicroE Systems' Mercury 3000Si kit encoders are smaller, higher performance, faster to install, and easier to set up and align than any other encoder. The tiny sensor fits into very tight spaces and works in both linear and rotary applications. The industry-standard SPI serial data interface is ideal for encoders and produces extremely high resolution at high motion speed - up to 30X faster than A-quadrant-B encoders. The SPI standard is supported by many DSP chip manufacturers and is easy to implement in your OEM controller design.

New features

- New metal enclosure for SmartSignal™ electronics
- Best-in-Class noise immunity for harsh environments
- Shorter length for smaller, tighter cabinets
- Frame mounting compatible for easy installation
- Robust metal housing with easy access locking screws
- Double shielded long life cable
- CE compliance pending

Standard features

- Smallest sensor- 1/3 the size of other encoders
- Revolutionary bolt-in alignment for many applications
- Advanced SmartSignal electronics built into shielded D-sub connector
- Serial Word output with interpolation in binary steps for resolutions to 0.020µm* (linear); 16.8M CPR (rotary)
- LED set up indicators for sensor alignment and index location
- Bi-directional index signal is repeatable to encoder resolution

Table of Contents

System & Sensor	pg 1-5
SmartSignal Electronics	pg 6-7
SmartSignal Software	pg 8
Scales	pg 9-10
Ordering Information	pg 10

Optional features:

- Glass scale length or diameter
- Linear lengths from 5mm to 2m
- Rotary diameters from 12mm to 108mm
- Cable length of 0.5m, 1m, 2m, or custom
- SmartSignal Software

* Resolution values shown are approximate - see p. 4 for exact values.

System Configurations

Standard and Optional Equipment

Sensor Cable
The standard cable is double shielded and available in lengths of 0.5m, 1m or 2m.

Encoder Sensor
Same for linear and rotary scales.

SmartSignal™ Electronics Module
New Metal Enclosure Provides Best-in-Class Noise Immunity

A 15 pin high density D-sub connector mates to the customer controller.

M3000Si Smart Encoder Systems Standard Equipment

RS 232 Interface Adapter
The adapter provides connections to a PC, the encoder system and the controller.

M3000Si Optional Equipment

SmartSignal™ Software
The software module enables all programmable and diagnostic features plus displays encoder output and signal strength. See page 8 for details.

Broader Alignment Tolerances, Increased Standoff Clearance, Smallest Sensor and More

Why Mercury Encoders Make It Easier To Design High Performance Into Your Equipment

Eliminate the Frustration of Touchy Encoder Alignment

Mercury Solves this Problem for Good

Fussy alignment is no longer a concern. With Mercury's patented PurePrecision™ optics, advanced SmartSignal™ electronics and LED alignment indicators, you can push the sensor against your reference surface, tighten the screws and you're finished. Try that with brand X or Y.

This performance is possible thanks to relaxed alignment tolerances, particularly in the theta Z axis. Mercury offers a ± 2° sweet spot— that's a 300% improvement over the best competitive encoder. And that will result in dramatic savings in manufacturing costs.

No other commercially available encoder is easier to align, easier to use, or easier to integrate into your designs.

Alignment Tolerance Comparison**

	Mercury*	Brand X	Brand Y	Mercury vs. Best Competitor
Z Standoff	± 0.15mm	± 0.1mm	± 0.1mm	Mercury is 50% better
Y	± 0.20mm for linear ± 0.10mm for rotary ≥19mm dia.	± 0.1mm	unspecified	Mercury is 100% better
theta X	± 1.0°	unspecified	± 1.0°	
theta Y	± 2.0°	± 0.1°	± 1.0°	Mercury is 100% better
theta Z	± 2.0°	± 0.006°	± 0.5°	Mercury is 300% better

*Measured at a constant temperature for one axis at a time with all other axes at their ideal positions.

**Based on published specifications

Mercury Can Reduce System Size and Cost

Mercury's sensor height is 44% shorter than competitive encoders, making it easy to fit into your design. This reduction can also cut total system weight and cost by allowing the use of smaller motors and stages. Safe system operation is also enhanced thanks to Mercury's generous standoff clearance— 200% greater than other encoders. And its standoff tolerance is 50% greater than the best alternative.

This significantly relaxes mechanical system tolerances, while reducing system costs.

Mechanical Dimension Comparison**

	Mercury	Brand X	Brand Y	Mercury vs. Best Competitor
Sensor Z height	8.4mm	23mm	15mm	44% better
Standoff clearance	2.4mm	0.5mm	0.8mm	200% better
Standoff tolerance	± 0.15mm	± 0.1mm	± 0.1mm	50% better
System height	11.7mm	28.5mm	15.8mm	26% better

**Based on published specifications

* Dimensions shown illustrate encoder system standoff clearance; see Mercury Encoder Interface Drawings for correct design reference surfaces.

System Specifications

Resolution and Maximum Speed

Mercury 3000Si systems have interpolation from x4 to x1024 in binary steps. Below is a table of values. Unlike A-quad-B encoders, the M3100Si's resolution does not drop off with speed.

Linear - 20µm grating pitch

Interpolation	Resolution	Maximum Speed
x4	5.000 µm/count	7200mm/s
x8	2.500 µm/count	7200mm/s
x16	1.250 µm/count	7200mm/s
x32	0.6250 µm/count	7200mm/s
x64	0.3125 µm/count	7200mm/s
x128	0.15625 µm/count	7200mm/s
x256	0.078125 µm/count	7200mm/s
x512	0.0390625 µm/count	7200mm/s
x1024	0.01953125 µm/count	7200mm/s

To calculate desired linear interpolation multiplier, use the following equation

$$\text{Interpolation Multiplier} = \text{Grating Period (20}\mu\text{m)} / \text{Desired Resolution (}\mu\text{m/count)}$$

Rotary - 20µm grating pitch

Rotary Glass Scale Diameter	Fundamental Resolution	Interpolation				
		x4	x128	x256	x1024	
0.472" [12.00mm]	1650 CPR	Note: The range of available values is x4 to x1024 in binary steps; example values below.				
		interpolated resolution (CPR)	6,600	211,200	422,400	1,689,600
		interpolated resolution (arc-sec/count)*	196.4	6.14	3.08	0.767
		interpolated resolution (µrad/count)*	952	29.7	14.86	3.79
		maximum speed (RPM)	13090	13090	13090	13090

SmartSignal™ Electronics Module

The Mercury 3000Si encoder system includes a SmartSignal electronics module. This compact, fully-featured signal processing system performs the following functions:

- High speed serial data output in SPI format
- Interpolation - up to 1024X
- User selectable interpolation in binary steps
- Accuracy optimization - sensor signals are automatically optimized to improve system accuracy and maximize repeatability
- Signal strength indication - red / yellow / green LEDs assist during setup and provide diagnostics at a glance
- Low Signal alarm
- Power-indicating LED
- Computer interface - for programming and data acquisition using SmartSignal software
- Superior EMI / RFI immunity - CE compliance pending
- Mounting options - all electronics are within the EMI-shielded connector housing and can be screwed directly into a mating connector that is bulkhead mounted, or the module may be mounted to the frame of your motion system and connected using an extension cable

High Speed Serial Interface

Motion system engineers who are optimizing their system can boost its performance by interfacing their SPI-compatible controller with the Mercury 3000Si. Its industry standard SPI high-speed serial data interface is supported by multiple DSP chip manufacturers, including TI, Motorola and Analog Devices, and provides a robust connection that is ideal for encoder interfacing. With the Mercury 3000Si, encoder position values are sent directly into the controller's DSP. Limitations of encoders with A-quadrant-B output are completely eliminated. Standard Mercury 3000Si features include:

- Very high motion speed with high encoder resolution - up to 7.2m/s movements with 0.020µm* resolution
- 10MHz max. input clock frequency / 250kHz position word sample rate
- RS422 voltage levels are resistant to Electro Magnetic Interference and support long cable runs
- Five different modes for adjusting or zeroing serial position data relative to the index mark on the scale. Note that one of these modes must be selected at the time of ordering. Consult the Installation Manual or MicroE Applications Engineering if necessary.

- No Index: No changes are made to the position word at the index mark.
- Mode 1: Zeros the fringe counter at the first encounter with index mark after power up.
- Mode 2: Zeros the fringe counter at every encounter with index mark.
- Mode 3: Zeros the fringe counter at the first encounter with index mark after power up and subtracts the index position from the calculated position making the index mark the zero position of the encoder.
- Mode 4: Zeros the fringe counter at every encounter with index mark after power up and subtracts the index position from the calculated position making the index mark the zero position of the encoder.
- Mode 5: Subtracts the index position from the calculated position but never clears the fringe counter.

* Resolution values shown are approximate - see p. 4 for exact values.

SmartSignal module enclosure provides "Best-in-Class" noise immunity for high noise environments.

Mercury 3000Si Outputs:

15 pin high density Male D-sub connector

PIN	FUNCTION
1	Reserved - Do not connect
2	Serial programming interface - transmit*
3	Serial programming interface - receive*
4	Serial Data Out- (SDO-)
5	Serial Data Out+ (SDO+)
6	Reserved - Do not connect
7	Chip Select+ (n_CS+)
8	Chip Select- (n_CS-)
9	Trigger- (TRIG-)
10	Trigger+ (TRIG+)
11	Inner shield
12	+5VDC
13	Ground
14	Serial Clock (SCK+)
15	Serial Clock (SCK-)

* The electronics module's serial computer programming interface can be translated to be RS-232 compatible using the MicroE SmartSignal Computer Interface Adapter or a voltage translation circuit of your own design.

All Specifications are subject to change. All data is accurate to the best of our knowledge. MicroE Systems is not responsible for errors.

Serial Data Format

The data word, which includes the status and position words, is transferred with the most significant bit (MSB) first. The data word length is up to 36 bits long. The most significant 8 bits are the status word. The next 28 bits are the position word. This position word is large enough to keep track of a measurement length of 5.24 meters. The interpolation depth of the Mercury 3000Si is X1024. If the user prefers smaller interpolation depths then fewer spiClock signal clocks can be sent to the interpolator and fewer bits will be shifted out.

Status Word Definitions

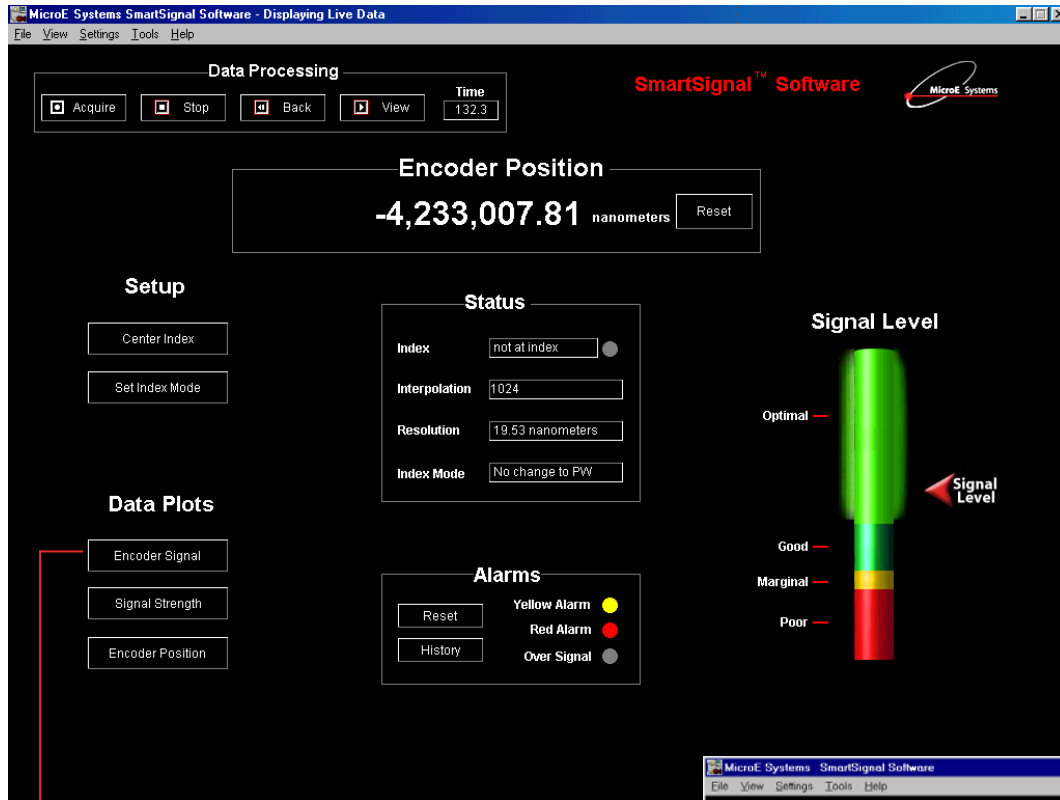

Bit	Name	Description
0	Red Alarm	Asserted low if signal level is out of range
1	Yellow Alarm	Asserted low if signal level is near out of range
2	Index Mode	Asserted high indicates index angle in acquire mode
3	Index Window	Asserted high when encoder is within physical window
4 to 7	Reserved

SmartSignal Software for Mercury 3000Si Encoder Systems

SmartSignal Software makes Mercury the industry's easiest to use encoder. It helps you program, set up, use, and diagnose Mercury 3000Si encoders with the click of a mouse. Compatible with Windows 95, 98, ME, NT, 2000, and XP.

Install Mercury Encoder System

- Align sensor using *Signal Level* display and *Encoder Signal* data plot
- Locate index and see when sensor is over the scale's index mark
- Verify sensor output over length of scale using the *Signal Strength* plot

Monitor Mercury Encoder Operation

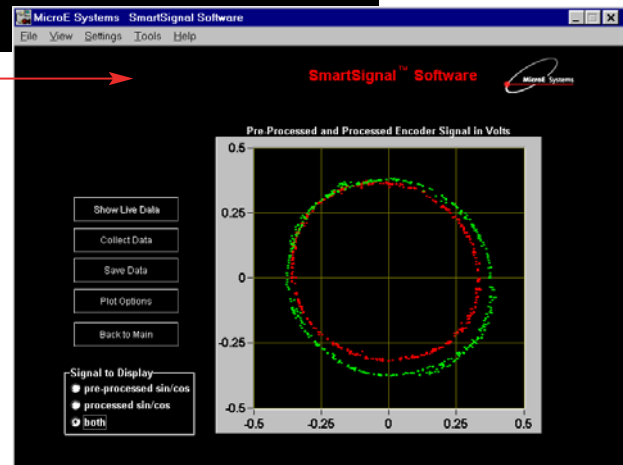

- Read encoder position in engineering units of your choice
- Read the encoder's hour meter to monitor system usage
- Capture alarms while system operates unattended

Diagnose Mercury Encoder Performance

- Capture signal data and email it to MicroE for rapid diagnostic support
- Monitor alarms, view the alarm history log

System Description

The SmartSignal Software system includes Software on CD, a computer interface adapter, computer cable, and a power adapter.

The encoder signal plot, or Lissajous plot, reveals the underlying strength and uniformity of the sensor's output.

How to Order SmartSignal Software

To Purchase the SmartSignal Software system, use this Model Number: SSWA120 for 120 VAC, 60Hz US Standard 2-prong plug or SSWA220 for 220 VAC, 50 Hz European Std. 2-prong plug

Scale Specifications

Standard and Customized Scales

MicroE Systems offers a wide array of chrome on glass scales for the highest accuracy and best thermal stability. Easy to install, standard linear and rotary scales meet most application requirements. Customized linear, rotary, and rotary segment scales are available where needed. All scales include an optical index. Mercury's glass scales save time by eliminating motion system calibrations or linearity corrections required by other encoders, and provide better thermal stability than metal tape scales.

Options include:

- *Standard linear*: 30mm - 2m
- *Standard rotary*: 12mm - 107.95mm diameter, with or without hubs
- *Custom linear**: special lengths, widths, thickness, index mark locations and special low CTE materials
- *Custom rotary**: special ID's, OD's (up to 304.8mm), index mark outside the main track and special low CTE materials
- *Mounting of hubs for rotary scales*: MicroE Systems can mount and align standard, custom, or customer-supplied hubs
- *Rotary segments**: any angle range; wide range of radius values

*Custom scales or rotary segments are available in OEM quantities. Contact your local MicroE Systems sales office.

Standard Short Linear Scales
