Optical Encoders	5
Motor Controller	6
Sonar Sensors	7

**Logitech QuickCam Pro 4000**

**Connection to OnBoard PC by USB port**

**Used to stream-live video from the Wunderbot onto the internet**

#### **Product Specifications**

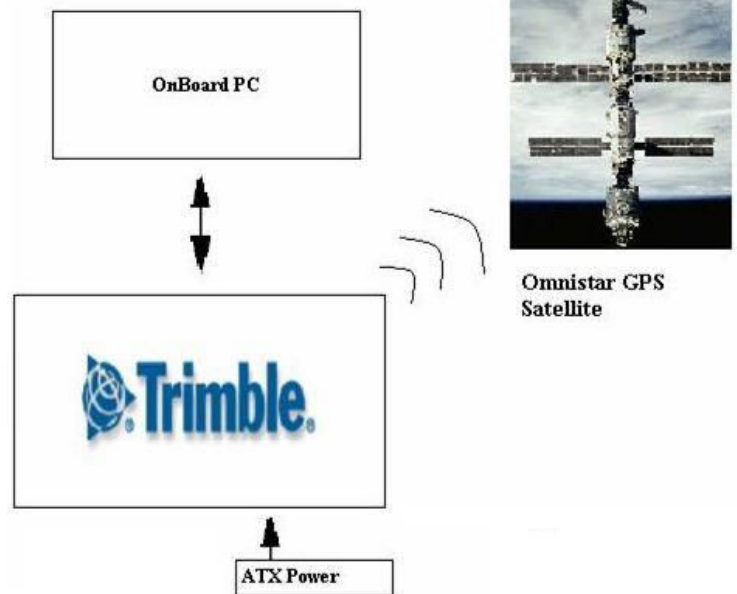

- \* Video capture: Up to 640 x 480 pixels (VGA CCD)
- \* Still image capture: Up to 1280 x 960 pixels, 1.3 megapixels (software interpolated)
- \* Frame rate: Up to 30 frames per second
- \* Shoot 1.3 megapixel (software interpolated) photos and high-quality videos
- \* Hear live audio with the built-in microphone

### Trimble AgGPS114 Real-Time DGPS Smart Antenna

General:	12 channel L1 code phase receiver
Update Rate:	1 Hz Standard; 10 Hz Optional
Position Accuracy:	sub-meter differential
Time to First Fix:	<30 sec, typical
NMEA Messages:	GGA, GLL, GRS, GST, VTG, RMC, GSA, GSV, XTE, ZDA, ALM, MSS
Communication ports:	2 ea. RS-232, 1 ea. J1939 (CAN 2.0B)
Weight:	22 oz. (0.52 kg)
Power:	3.1 W, 9 to 32 volts
Operating Temp:	-30°C to +60°C (-22F to +140F)
Storage Temp:	-40°C to +80°C (-40F to +176F)
Humidity:	100% condensing
Casing:	UV-resistant Plastic 6 in. D X 5 in. H (152 mm D X 127 mm H)
Compliance:	FCC Class B, CE, EP 455

#### STANDARD FEATURES

- Completely self-contained in a tough plastic housing
- 12-channel DGPS receiver
- Positioning based on high-performance GPS engine design
- Internal L-band satellite differential receiver
- World-wide operation with both Omnistar and Racal subscriptions
- External RTCM correction input
- Sub-meter differential accuracy
- Two programmable RS-232 serial ports
- CAN bus J1939 compatible
- 1-PPS output
- Outputs GPS position in either NMEA or TSIP data messages
- Configuration software
- Magnetic mount
- Remote Display Interface (RDI) software for Windows 95/98
- WAAS/EGNOS upgradable
- AgGPS 170 Field Computer compatible
- AgGPS 70 Remote Display and Logger compatible

RS-232 serial communication transmits and receives information and instructions between the onboard PC and "Differential" GPS

Full Data Sheets for Trimble GPS114 are located in the downloads page of the Wunderbot 3 website.

The Trimble AgGPS 114, a differential GPS receiver, offers positional output accurate within 30 centimeters. Important information about location, speed, and distance is interpreted from GPS data.

### PNI TCM2-50 Digital Compass

#### Patented Magneto-Inductive Sensors

The magnetic sensors in the TCM2 use PNI's patented technology, providing superior accuracy and lower power consumption compared to Flux Gate or Magneto-Resistive sensors.

#### Electronic Gimbal

Provides accurate and reliable compass readings up to  $\pm 50^\circ$  tilt. Unlike mechanically gimbaled 2-axis fluxgate compasses, the magnetic sensors' orientations are fixed relative to magnetic distortion sources for superior accuracy in all conditions.

#### Accurate in any environment

Advanced electronics and built in algorithms counter the effects of hard iron interference.

#### Heading Information

Accuracy when level:  $1.0^\circ$  RMS

Accuracy when tilted:  $1.5^\circ$  RMS

Resolution:  $0.1^\circ$

Repeatability:  $\pm 0.3^\circ$

#### Tilt Information

Accuracy:  $\pm 0.4^\circ$

Resolution:  $0.3^\circ$

Repeatability:  $\pm 0.3^\circ$

Range:  $\pm 50^\circ$

The TCM2-50 is at the End of Life do to obsolete components. Inventory is available to support current customers, however it is limited. Please contact us to discuss how to transition to a new version of the TCM module.

The TCM2-50 precision 3-Axis orientation sensing instrument provides:

- Tilt compensated compass heading (also known as azimuth, yaw, or bearing angle). The heading is accurate even when tilted up to  $\pm 50^\circ$  due to precise electronic gimbal or tilt compensation.
- Built in calibration to correct compass heading when near magnetic sources and magnetic materials, known as Hard Iron calibration.
- Precise tilt angles relative to Earth's gravity, known as the pitch and roll angle. Pitch angle is also known as elevation or dive angle. The roll angle is sometimes also called the bank angle.
- Temperature measured in  $^\circ\text{F}$  or  $^\circ\text{C}$ .
- Calibrated or uncalibrated magnetic field intensity in 3 dimensions.

Data is output on a standard RS-232 serial interface with a simple text protocol that includes checksums for superior data integrity.

#### Power Requirements

##### Supply Voltage:

# +5 VDC regulated or 6 to 18 VDC unregulated

##### Current Draw:

# Standard Mode: 15-20 mA

# Low Power Mode: 7-13 mA

# Sleep Mode: 2.5 mA

##### Operating Temperature

$-20^\circ$  to  $+70^\circ$  C

##### Interfaces

# DIGITAL: RS232C

# NMEA0183

# ANALOG: 0-5 V Linear, 19.53mV resolution (256 discrete levels)

# 0-5 V Quadrature (sine and cosine)

##### Dimensions

63.5 x 50.8 x 31.75 mm

##### Weight

45.5 grams

Full Data Sheets for PNI Digital Compass are located in the downloads section of the Wunderbot 3 website, under TCM2-50

The Emergency Stop System includes an Handheld RF Emergency Stop Transmitter with a red push button and a RF remote stop receiver.

The RF receiver board controls a power relay, which is placed parallel between the control line of the motor controller and ground. When the E-stop transmitter red button is pressed a signal is sent to the receiver then a relay is tripped, the control line is shorted, the motors are halted, and the motor controller shuts off immediately. This system was thoroughly tested and has proven to be reliable.

Two 12V 60-amp hour batteries connected in series, provides approximately two hours of operating time. A 300W 24V DC-DC ATX power supply provides voltage regulation for the onboard PC and all system components.

---

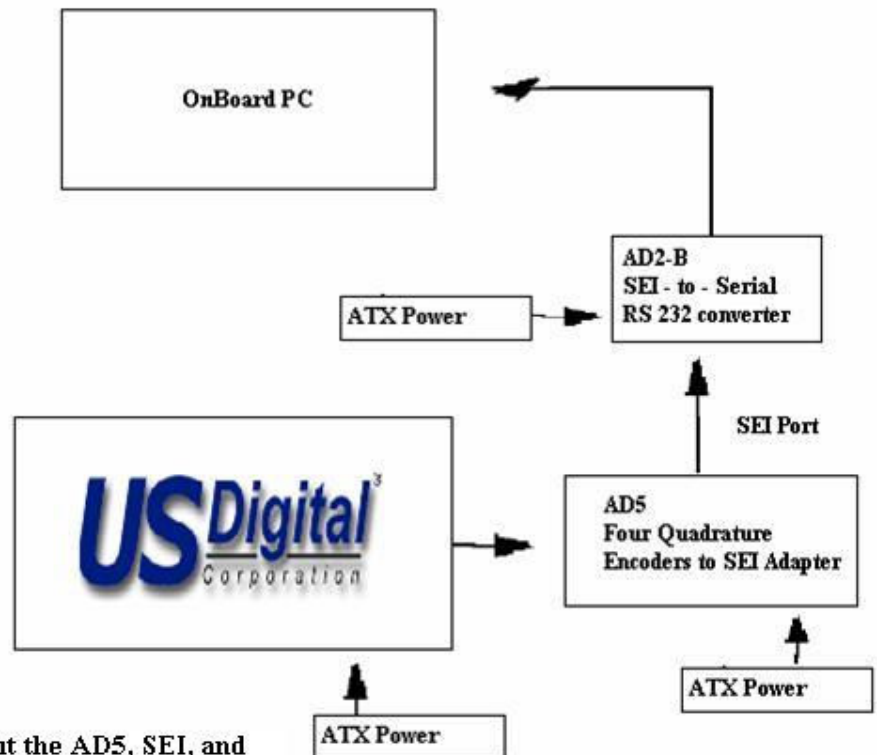

### US Digital Optical Encoders

Data flows from optical encoders which are attached to the drive-shaft of the motor. There is a plate that has small notches in it, that an optical light counts the ticks as the motor spins the wheels. These ticks are about 100 counts per revolution, which with the tire size gives us an extremely accurate measurement for our position.

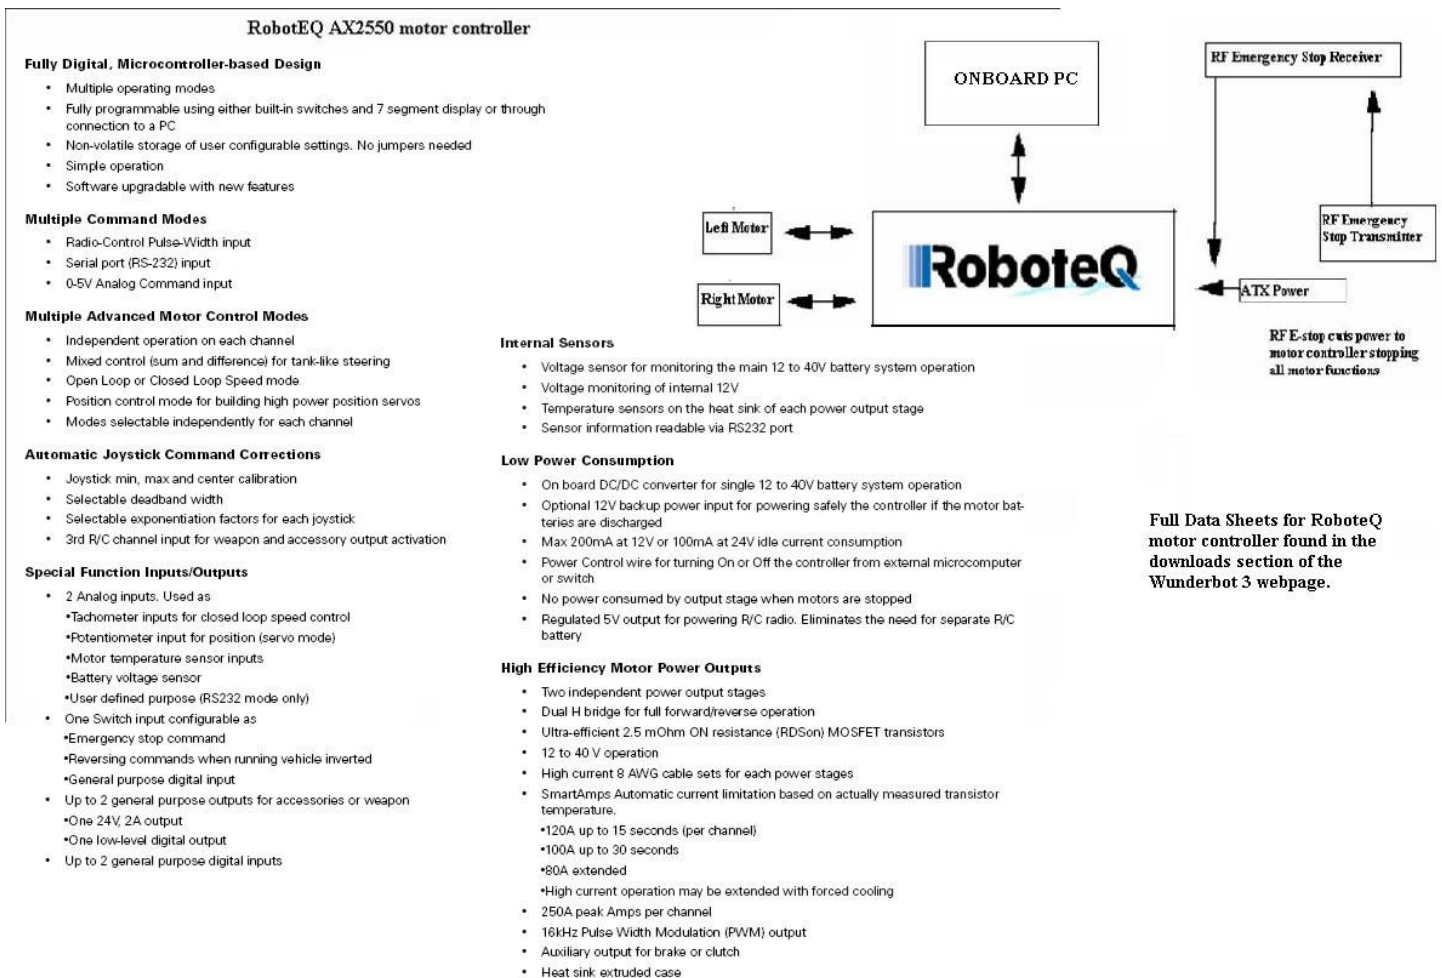

From the optical encoders information moves onto the AD5, which can handle up to 4 optical encoders at a given time. This speeds up the counting from the encoders at a maximum rate of 2 Mhz. Also it uses baud rates of 115K baud and has digital filtering of signals.

From the AD5 the information leaves through the SEI port, which in use with the AD2-B platform which makes everything easy to transform into serial RS232 to connect straight to the OnBoard PC. AD2-B is the standard 9 pin serial port.

Do to large quantity of information about the AD5, SEI, and AD2-B, the full data sheets and data communications for each piece of equipment that is depicted in the above block diagram could be found in the Downloads section of the Wunderbot 3 website under US Digital Optical Encoders.

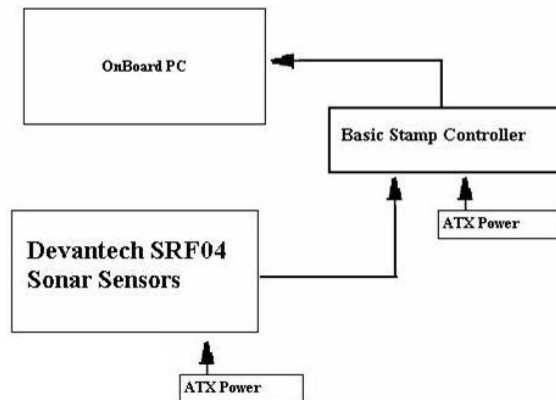

#### Devantech SRF04 Sonar Sensors

RS-232 serial communication transmits and receives information and instructions between the onboard PC and basic stamp which has the data from the Sonar Sensors.

These particular sonar sensors have the ability to detect objects up to 13 feet away. In testing in past years we have detected objects from 8 feet away. A basic stamp operates each device and relays data via serial link to the onboard computer.

#### Specifications

Beam Pattern	see below
Voltage	5v
Current	30mA Typ. 50mA Max
Frequency	40kHz
Maximum Range	3 m
Minimum Range	3 cm
Sensitivity	Detect a 3cm diameter stick at > 2 m
Input Trigger	10uS Min. TTL level pulse
Echo Pulse	Positive TTL level signal, width proportional to range.
Weight	0.4 oz.
Size	1.75" w x 0.625" h x 0.5" d

Beam Pattern
